ELEMENTS OF ELECTRICAL ENGINEERING
Course Code : UE25EE141A/B

PES UNIVERSITY

FACULTY CONTRIBUTED:

Department of EEE, RR Campus

Prof . Jyothi T N
Prof. Vadhiraj K P P
Prof. Kruthika N
Prof. Suma S
Prof. Pushpa K R
Prof. Sangeeta Modi

Department of ECE, EC Campus

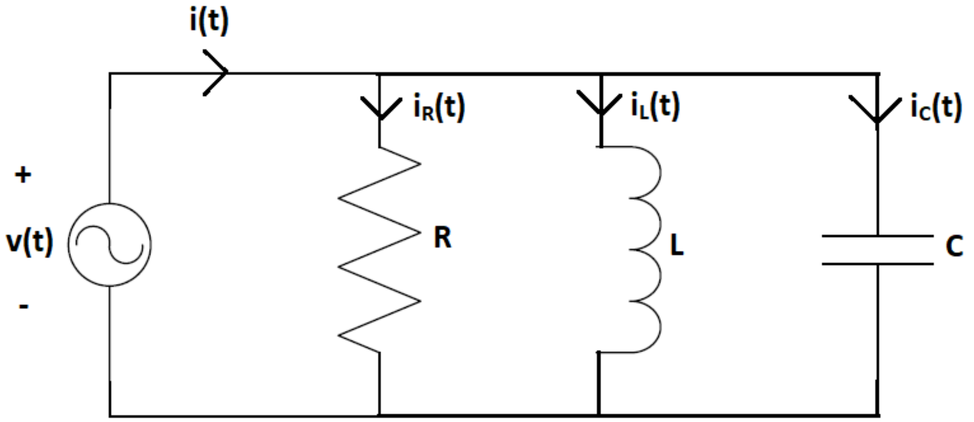
Prof. Lokesh L
Prof. Dhanashree G Bhate
Dr. Renuka R Kajur
Prof. Rajesh Chandrashekar
Prof. Sangam Kumar G H

ELEMENTS OF ELECTRICAL ENGINEERING (UE25EE141A/B)

Analysis of Parallel RLC circuit

Jyothi T N
Department of Electrical & Electronics Engineering

Parallel RLC Circuit



By KCL, $i(t) = i_R(t) + i_L(t) + i_c(t)$

In Phasor form, $\dot{I} = \bar{I}_R + \bar{I}_L + \bar{I}_C$

$\bar{I}_R = \bar{V} * G \qquad \bar{I}_L = \bar{V} * (-jB_L) \qquad \bar{I}_C = \bar{V} * (jB_C)$

$\bar{I} = \bar{V} * (G - jB_L + jB_C)$

$Y_T = \dfrac{\bar{I}}{\bar{V}} = (G - jB_L + jB_C) = \sqrt{G^2 + (B_L - B_C)^2} \angle Tan^{-1}\left(\dfrac{B_C - B_L}{G}\right)$

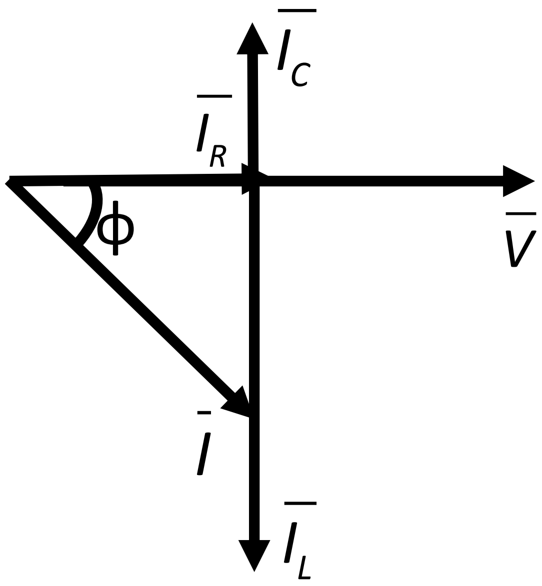
Case 1: $B_L > B_C$

If $B_L > B_C$ then $VB_L > VB_C$

i.e., $|\bar{I}_L| > |\bar{I}_C|$

The circuit behaves effectively as inductive circuit i.e., parallel RL type.

Phasor Diagram:



$$= \mathrm{Tan}^{-1}\left(\frac{B_L - B_C}{G}\right)$$

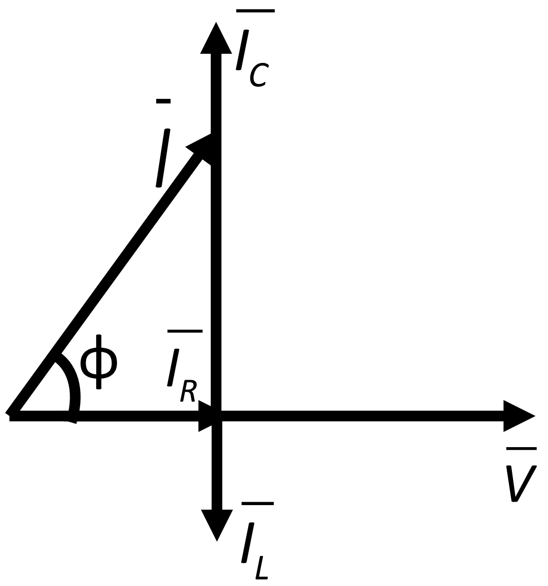
Case 2: $B_C > B_L$

If $B_C > B_L$ then $VB_C > VB_L$

i.e., $\left|\bar{I}_C\right| > \left|\bar{I}_L\right|$

The circuit behaves effectively as a capacitive circuit i.e., parallel RC type.

Phasor Diagram:



$$= \mathrm{Tan}^{-1}\left(\frac{B_L - B_C}{G}\right)$$

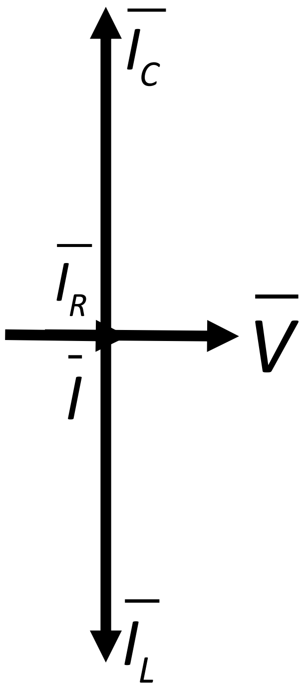
Note: ϕ will be negative in this case since $B_L < B_C$

Case 3: $B_L = B_C$

If $B_L = B_C$ then $VB_L = VB_C$ i.e., $|\bar{I}_L| = |\bar{I}_C|$

The circuit behaves effectively as a purely resistive circuit. This case is called **'Parallel Resonance'** case.

Phasor Diagram:



$$\bar{I} = \bar{I}_R$$

$$Y = G$$

$$\phi = 0^\circ$$

Question:

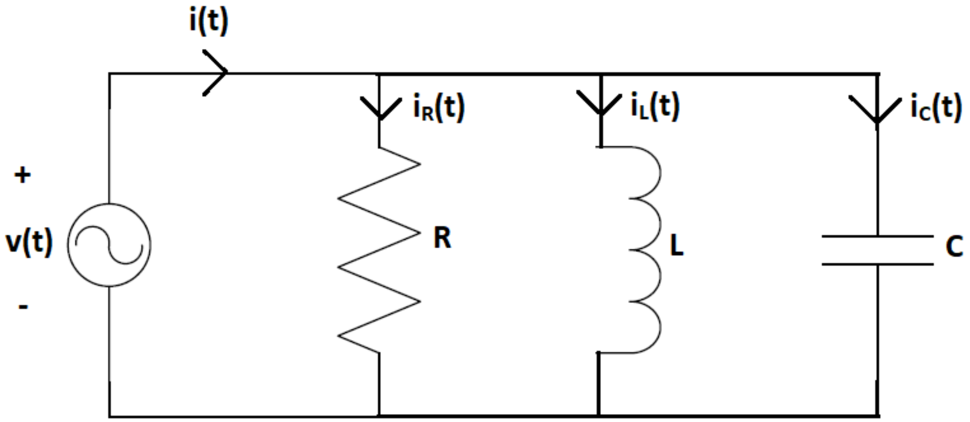
Three circuit elements $R=2.5\Omega$, $X_L=4\Omega$ and $X_C=10\Omega$ are connected in parallel, the reactances being at 50Hz.

a) Determine the admittance of each element and hence obtain the input admittance.

b) If this circuit is connected across a 10V, 50Hz AC source, determine the current in each branch and the total input current.

Numerical Example

Solution:



i) Admittance of branch1, $Y_1 = \dfrac{1}{Z_1} = \dfrac{1}{R} = G = 0.4S$

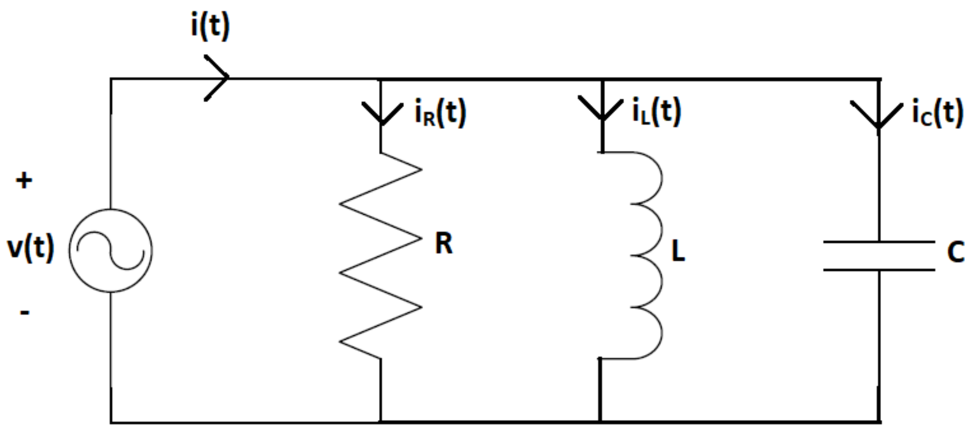
Admittance of branch2, $Y_2 = \dfrac{1}{Z_2} = \dfrac{1}{jX_L} = -jB_L = -j0.25S$

Admittance of branch3, $Y_3 = \dfrac{1}{Z_3} = \dfrac{1}{-jX_C} = jB_C = j0.1S$

Input Admittance $Y_{in} = Y_T = Y_1 + Y_2 + Y_3 = (0.4 - j0.15)S$

Numerical Example

Solution (Continued..) :



ii) Taking supply voltage as reference, $\overline{V} = 10\angle 0°V$

current in branch 1, $\overline{I_R} = \dfrac{\overline{V}}{Z_1} = \overline{V}Y_1 = 10\angle 0°*0.4 = 4\angle 0°A$

current in branch 2, $\overline{I_L} = \overline{V}Y_2 = 10\angle 0°*(-j0.25) = 2.5\angle -90°A$

current in branch 3, $\overline{I_C} = \overline{V}Y_3 = 1\angle 90°A$

Input current, $\overline{I_S} = \overline{I_R} + \overline{I_L} + \overline{I_C} = 4.27\angle -20.55°A$

Text Book & References

Text Book:

1. "Basic Electrical Engineering" S.K Bhattacharya, 1st Edition Pearson India Education Services Pvt. Ltd., 2017
2. "Basic Electrical Engineering", D. C. Kulshreshta, 2nd Edition, McGraw-Hill. 2019
3. "Special Electrical Machines" E G Janardanan, PHI Learning Pvt. Ltd., 2014
