PROBLEM SOLVING WITH C
UE25CS151B

Prof. Sindhu R Pai, Asst Prof.
Department of Computer Science and Engineering

PES UNIVERSITY

1. Formatted output function
2. Formatted input function
3. Unformatted functions

PES UNIVERSITY

Formatted output function – printf()

- int printf(const char *format, ...)
- Predefined function in stdio.h
- Sends formatted output to stdout by default
- Output is controlled by the first argument
- Has the capability to evaluate an expression
- On success, it returns the number of characters successfully written on the output.
- On failure, a negative number is returned.
- Arguments to printf can be expressions
- Coding examples

PES UNIVERSITY

Format string

- % [flags] [field_width] [.precision] conversion_character
  where components in brackets [] are optional. The minimum requirement is % and a conversion character (e.g. %d).

- %d, %x, %o, %f, %c, %p, %lf, %s

- Coding examples

PES UNIVERSITY

Escape sequences

- Represented by two key strokes and represents one character
- \n, \t, \r, \a, \”, \’, \\, \b
- Coding examples

Formatted input function – scanf()

- int scanf(const char *format, ...)
- Predefined function in stdio.h
- & : Address operator is compulsory in scanf for all primary types
- Reads formatted input using stdin. By default keyboard
- This function returns the following value
  - >0 — The number of items converted and assigned successfully.
  - 0 — No item was assigned.
  - <0 — Read error encountered or end-of-file (EOF) reached before any assignment was made
- Coding examples

PES UNIVERSITY

Unformatted functions

- Character input and output functions – **getchar()** and **putchar()**
- String input and output functions – **gets()** and **puts()** This will be discussed in unit – 2
- Coding examples

THANK YOU

Dr. Shylaja S S, Director, CCBD & CDSAML, PESU
