ELEMENTS OF ELECTRICAL ENGINEERING

**Usage of Calculator to solve
Simultaneous Equations -
(991MS, 991ES PLUS, 991EX &
991CW)**

Prof. Jyothi T.N
Department of Electrical & Electronics Engineering

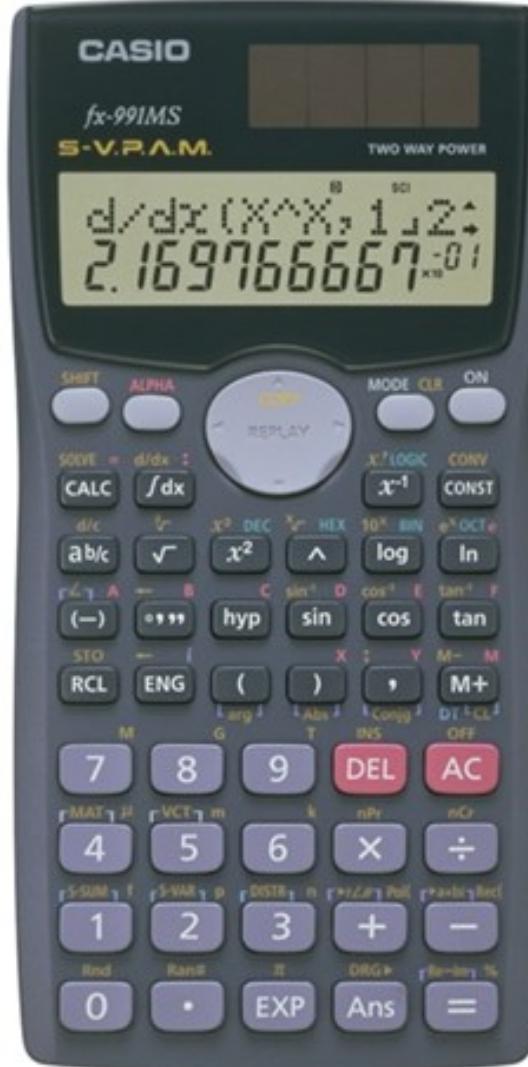

ELEMENTS OF ELECTRICAL ENGINEERING

Calculator Operation

FX 991MS

- Press mode button 3 times, then select option 1.
- Select the number of unknowns
- Then enter a1, press =, enter b1, press= and so on
(Eg: $a_1X+b_1Y+c_1Z=d_1$)
- Similarly enter the coefficients of 2nd equation and so on.
- The solution will be in the order of X, Y, Z.

ELEMENTS OF ELECTRICAL ENGINEERING

Calculator Operation

FX 991ES PLUS

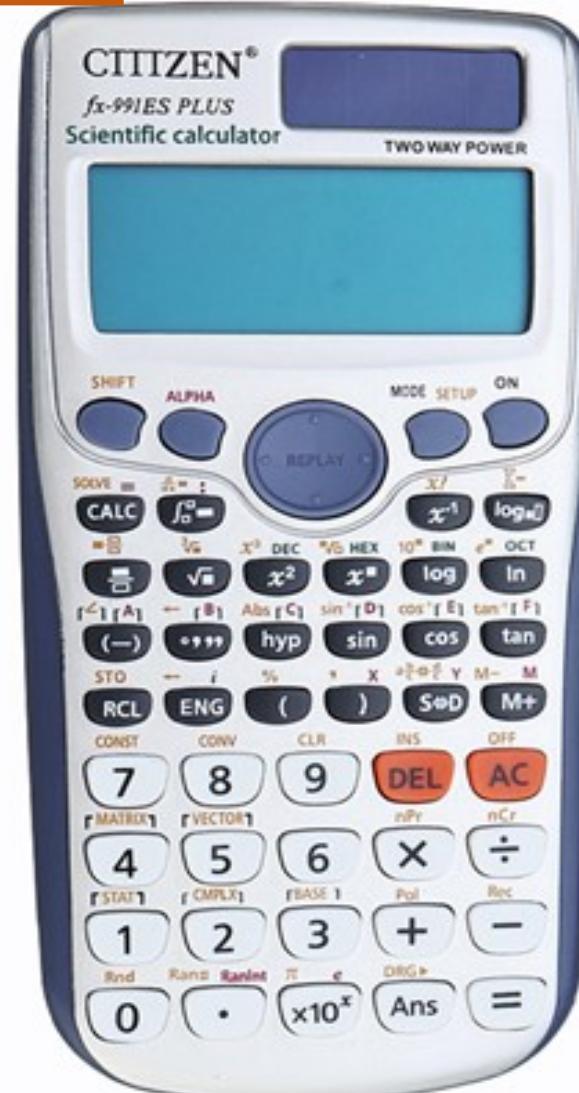

- Press mode button, then select option 5 (EQN).
 - Now select option 1 or option 2

(Option 1 is for 2 unknowns and option 2 is for 3 unknowns.)

- It will ask to fill the matrix with the coefficients of the equations.

(Eg: a1X+b1Y+c1Z=d1)

- The solution will be in the order of X, Y, Z.

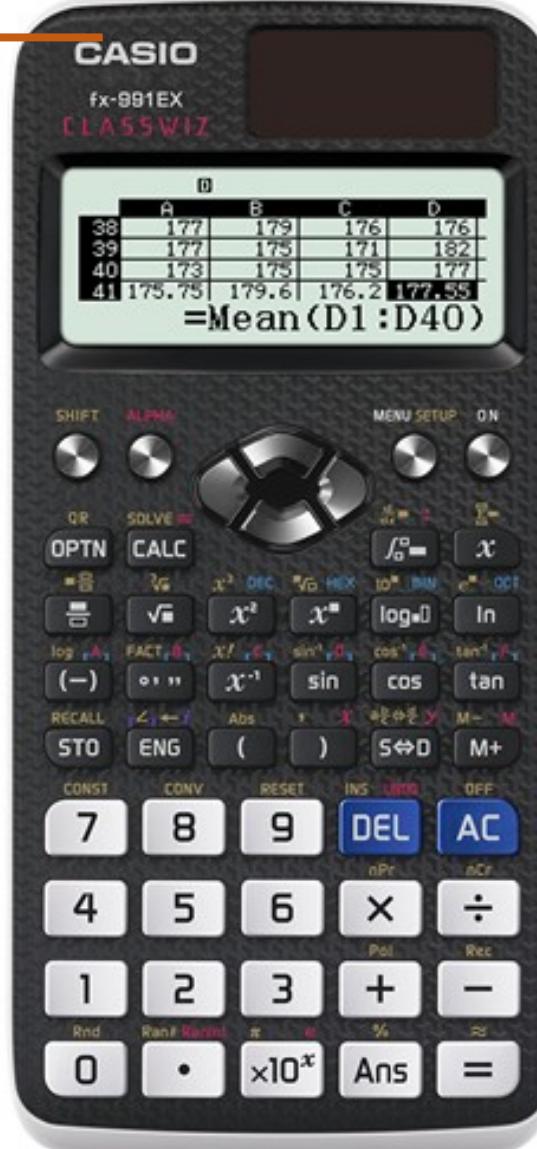

Calculator Operation

FX 991EX

- Press menu button, navigate down and then select option A ($XY=0$) by pressing = button.
- Now select option 1
- Select number of unknowns by pressing that number.
- It will ask to fill the matrix with the coefficients of the equations.

(Eg: $a_1X+b_1Y+c_1Z=d_1$)
- The solution will be in the order of X, Y, Z.

(NOTE: you can solve up to 4 number of unknowns in this calculator)

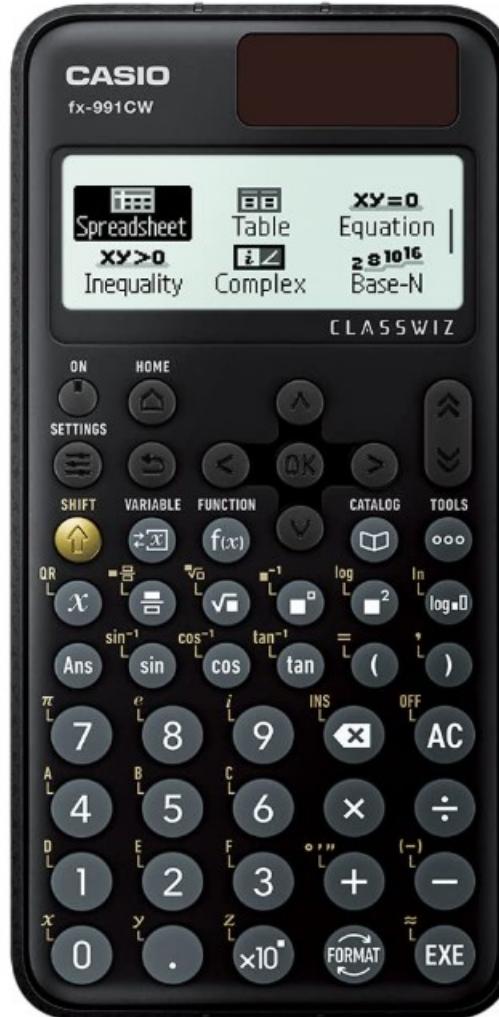

ELEMENTS OF ELECTRICAL ENGINEERING

Calculator Operation

FX 991CW

- Press Home button, navigate and then select the option $xy = 0$ (Equation) & press OK
- Now select “Simultaneous Equations” option & press OK
- Select number of unknowns & press OK
- It will ask to fill the matrix with the coefficients of the equations. After every entry in the matrix press EXE.
(Eg: $a_1X+b_1Y+c_1Z=d_1$)
- The solution will be in the order of X, Y, Z.

(NOTE: you can solve up to 4 number of unknowns in this calculator)

THANK YOU
