Find the area under the standard normal curve
between $z=0$ and $z = 1.55$

Find the area under the standard normal curve
between $z = -0.86$ and $z = 0$

Find the area under the standard normal curve
between $z = -0.44$ and $z = 1.76$

Find the area under the standard normal curve
between $z=0.57$ and $z = 2.49$

*# Find the area under the standard normal curve
Towards the right of $z = -1.96$*

Prob 1 Evaluate the following probabilities with the help of normal probability tables

1)

2) $P(z \geq 0.85)$

3) $P(-1.64 \leq z \leq -0.88)$

4) $P(z \leq -2.43)$

$P(|z| \leq 1.94)$

PROBLEMS ON NORMAL DISTRIBUTION

Prob2 : In the test on electric bulbs , it was found that the lifetime of a particular brand was normally distributed

With an average life of 2000 hours and S.D. of 60 hours.If a firm purchases 2500 bulbs .Estimate the number of bulbs likely to last for

- 1) More than 2100 hours
- 2) less than 1950 hours
- 3) more than 1900 hours and 2100 hours .

Ans :

PROBLEMS ON NORMAL DISTRIBUTION

PROBLEMS ON NORMAL DISTRIBUTION

Prob3 : The marks of 1000 students in an examination follows

A normal distribution with mean 70 and standard deviation 5 .Find the number of students whose marks will be

- 1) Less than 65
- 2) more than 75
- 3) between 65 and 75

Ans :

#Prob 4 : If 'x' is a normal variate with mean 30 and standard deviation 5 . Find the probability that

1)

2) $26 \leq x \leq 40$

$x \geq 45$

APPLICATIONS OF NORMAL DISTRIBUTION

The distribution is applied in problems concerning :

- 1) Calculation of errors made by chance in experimental measurements*
- 2) Computation of hit probability of a shot*
- 3) Statistical inference in almost every branch of science*
- 4) result analysis of a course examination*
- 5) income Distribution in Economy*
