

MATLAB SESSION-05

1. Find the laplace transformation of $e^{(at)} * t^n$.

Output: $n! / (s-a)^{n+1}$.

**2. Plot a 3D graph of a given Laplace Transform of a function.
 $f(t) = (\sin^3(3t))$.**

$$F(s) = 48 / ((s^2 + 4)(s^2 + 36)).$$

3. Find $L(e^{(3t)} \sqrt{3t})$.

Output: $(\sqrt{\pi}/2) * (1/(s-3)^{3/2})$
