

ASSIGNMENTS

Class-2

Geometry of Linear Equations

1. Using Row & column picture discuss the nature of the system
 $x - y = 2, 2x + y = 7$
2. Draw the Row picture and the Column picture of the following equations
 $x - 2y = 0, x + y = 6.$
3. Explain the column approach to solve the system $x - 2y = 3, 2x + y = 1.$
4. Explain the row approach to solve the system $2x - 3y = 3, x + 3y = -6.$
5. Explain the column approach to solve the system $x - 2y = 3, 2x - 4y = 5.$
