

3. Write a C program to show that pointer of any data type occupies same space.

```
#include<stdio.h>

int main() {

    int x= 38, *ptrx = &x;

    double y = 5.85, *ptry = &y;

    char ch = 'H' , *ptrc = &ch;

    char Name[] = "Ramayana";

    char *ptrname = Name;

    /*& is not used before Name because Name is itself const pointer to the string.*/

    printf ("Size of ptrx = %d bytes\n", sizeof(ptrx));

    printf ("Size of ptry = %d bytes\n", sizeof(ptry));

    printf ("Size of ptrc = %d bytes\n", sizeof(ptrc));

    printf ("Size of ptrname = %d bytes\n" , sizeof(ptrname));

    printf ("Size of x = %d bytes\n" , sizeof(x));

    printf ("Size of y = %d bytes\n", sizeof(y));

    printf ("Size of ch= %d bytes\n" , sizeof(ch));

    printf ("Size of Name= %d bytes\n", sizeof(Name));

    return(0);

}
```
